ABERDEEN PROVING GROUND REPORTS ON WATER QUALITY

ABERDEEN PROVING GROUND, Md. –

Aberdeen Proving Ground, following analysis of water samples, reports the water in the Kings Creek area of Bush River near the Waste Water Treatment Plant in the Edgewood Area of APG has returned to normal.

In July the treatment plant experienced sewer system bypasses and overflows on July 6, 15 and 23 during which water overflowing the chlorination tank and bypassing secondary treatment discharged into the Bush River.

The Harford County Department of Health and the Maryland Department of the Environment have been notified of the results.

Questions regarding APG waste water bypasses or operations should be directed to 410-278-1147 or 800-688-8705.
